4. Let's Play - "Count Me In!"

- Estimate and count all kinds of things.
- Talk with your child about estimation. Tell him that it is your "best guess."
- Talk about the kinds of things you can estimate: how many things there are, when you will arrive at a destination - how many minutes it will take, and how much something might cost? Then do it!
- Find a grouping of items and estimate how many there are in the group.

Improve literacy in children by increasing the number of words they hear

- You could use socks from the dryer, shoes in the closet or silverware that you have taken from a drawer and placed on the table in a cluster.
- You might estimate and count the number of cookies or snack crackers in a package.
- Remember, your child is most likely able to count to 10 without much help and possibly up to 20 once they get past 12 , but only use greater quantities of items if they are able to count higher.
